▪ Trigger

Create a Trigger Handler class

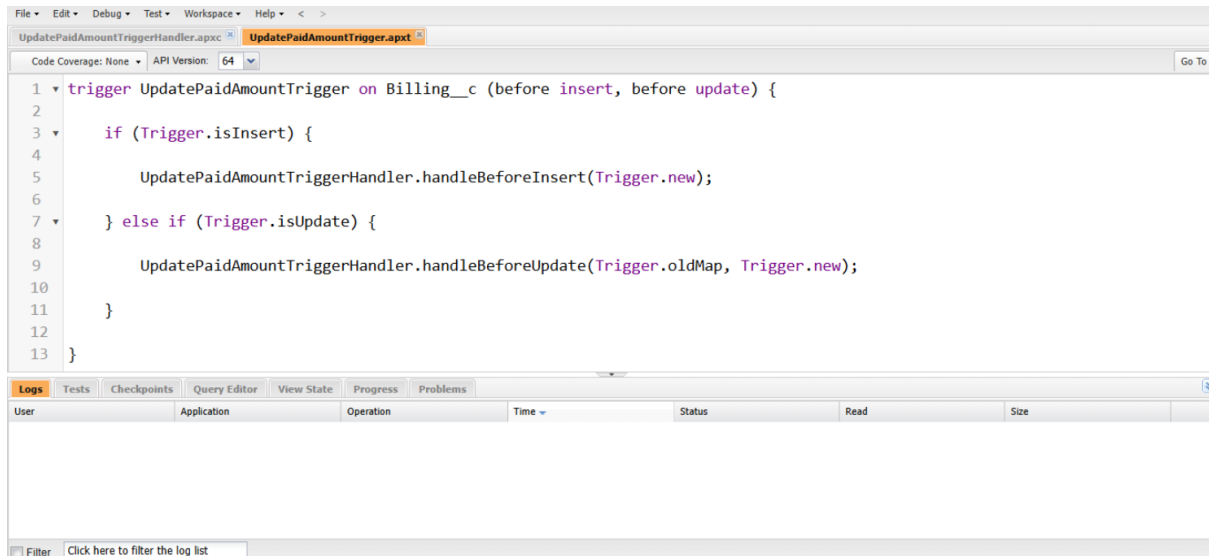

The screenshot shows the Salesforce IDE with the file 'UpdatePaidAmountTriggerHandler.apxc' open. The code is as follows:

```
1 public class UpdatePaidAmountTriggerHandler {
2
3     public static void handleBeforeInsert(List<Billing__c> newBillings) {
4
5         for (Billing__c billing : newBillings) {
6
7             billing.Paid_Amount__c = billing.Paying_Amount__c;
8
9         }
10    }
11 }
12
13
```

The IDE interface includes a menu bar (File, Edit, Debug, Test, Workspace, Help), a toolbar with 'Code Coverage: None' and 'API Version: 64', and a bottom panel with tabs for 'Logs', 'Tests', 'Checkpoints', 'Query Editor', 'View State', 'Progress', and 'Problems'. The 'Logs' tab is active, showing a table with columns: User, Application, Operation, Time, Status, Read, and Size. A 'Filter' button and a link 'Click here to filter the log list' are at the bottom left.

Create the trigger

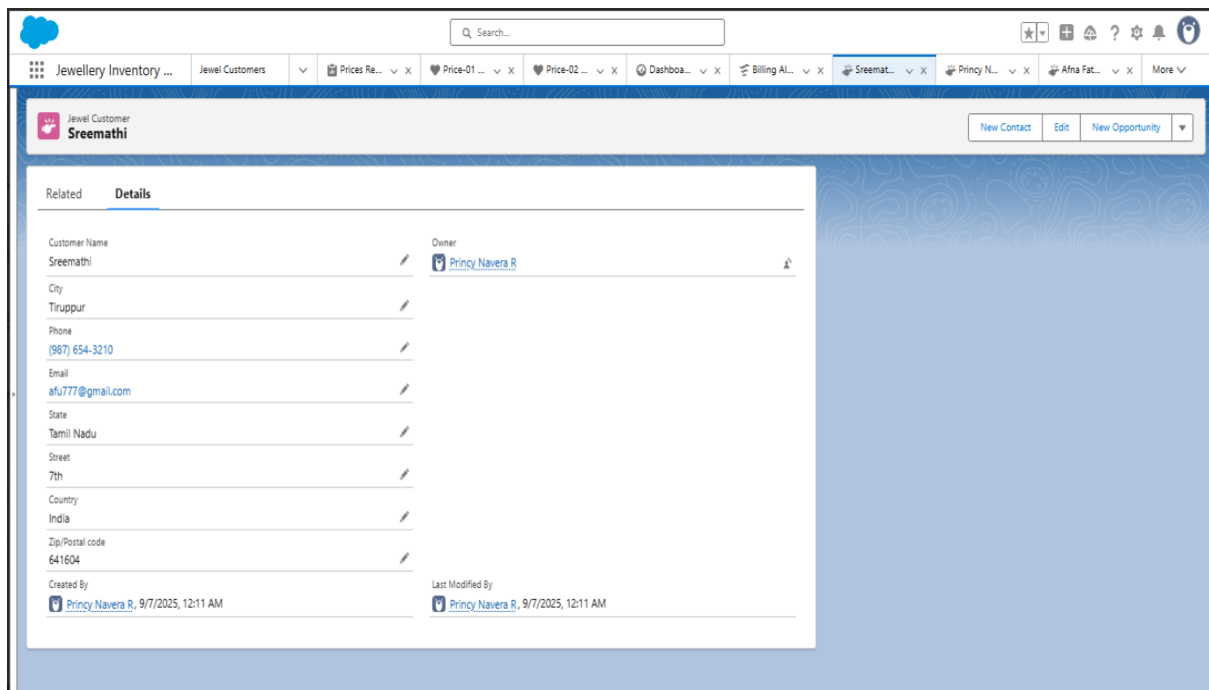

The screenshot shows an IDE window with the file `UpdatePaidAmountTrigger.apxt` open. The code defines a trigger on the `Billing__c` object, firing before insert and update operations. The trigger logic is as follows:

```
1 trigger UpdatePaidAmountTrigger on Billing__c (before insert, before update) {  
2  
3     if (Trigger.isInsert) {  
4  
5         UpdatePaidAmountTriggerHandler.handleBeforeInsert(Trigger.new);  
6  
7     } else if (Trigger.isUpdate) {  
8  
9         UpdatePaidAmountTriggerHandler.handleBeforeUpdate(Trigger.oldMap, Trigger.new);  
10  
11     }  
12  
13 }
```

Below the code editor, there is a 'Logs' tab and a table with columns: User, Application, Operation, Time, Status, Read, and Size. The table is currently empty.
